Railway Service

The BCRY Railway

The BCRY Railway services local industry between Barrie and Collingwood. As a low-density short line with low overhead, the BCRY has the flexibility to provide responsive customer service. Daily interchanges with CP Rail give local businesses efficient access to all North American markets.

Enjoy the many benefits of shipping by rail. The BCRY Railway offers a more economical way to ship when compared to trucking, especially if you are shipping long distances and hauling a large quantity of cargo.

Trains have far greater weight capacities than trucks, and that translates into greater savings for customers. One train pulling 20 cars equates to 40 to 50 trucks.

The Barrie Collingwood Railway is unique and provides Collingwood manufacturers with a huge advantage of doing business in Collingwood, Ontario, Canada.
